Setting up iCloud on Apple Devices

- If you're setting up a new iOS device, or to update to the latest version of iOS, go to the Settings menu, tap **General**, and tap **Software Update** to see if there's an update available.
- When you turn on a new iOS device or after you've completed the update to the latest version of iOS, follow the instructions in the setup assistant to activate your device and set up iCloud. If you skipped the setup process, tap the Settings icon on the Home screen, select **iCloud**, then enter your Apple ID.
- To enable automatic downloads for your music, apps, and books, tap the Settings icon on the Home screen and select **iTunes & App Stores**.
- To get the most out of iCloud, set it up with all of your devices.
